> Abstract:Both scientific progress and individual researcher careers depend
> on the quality of peer review, which in turn depends on paper-reviewer
> matching. Surprisingly, this problem has been mostly approached as an
> automated recommendation problem rather than as a matter where different
> stakeholders (area chairs, reviewers, authors) have accumulated experience
> worth taking into account. We present the results of the first survey of the
> NLP community, identifying common issues and perspectives on what factors
> should be considered by paper-reviewer matching systems. This study
> contributes actionable recommendations for improving future NLP conferences,
> and desiderata for interpretable peer review assignments.

About arXivLabs

arXivLabs: experimental projects with community collaborators

arXivLabs is a framework that allows collaborators to develop and share new arXiv features directly on our website.

Both individuals and organizations that work with arXivLabs have embraced and accepted our values of openness, community, excellence, and user data privacy. arXiv is committed to these values and only works with partners that adhere to them.

Have an idea for a project that will add value for arXiv's community? [**Learn more about arXivLabs**](https://info.arxiv.org/labs/index.html).
