Versioning

uv uses a custom versioning scheme in which the minor version number is bumped for breaking changes, and the patch version number is bumped for bug fixes, enhancements, and other non-breaking changes.

uv does not yet have a stable API; once uv's API is stable (v1.0.0), the versioning scheme will adhere to [Semantic Versioning](https://semver.org/).

uv's changelog can be [viewed on GitHub](https://github.com/astral-sh/uv/blob/main/CHANGELOG.md).

Cache versioning

Cache versions are considered internal to uv, and so may be changed in a minor

or patch release. See [Cache versioning](../../concepts/cache/#cache-versioning) for more.

Lockfile versioning

The `uv.lock` schema version is considered part of the public API, and so will only be incremented in a minor release as a breaking change. See [Lockfile versioning](../../concepts/resolution/#lockfile-versioning) for more.
