*

`core``

Code in `conda.core`` is the core logic. It is strictly forbidden from having side effects. No printing to stdout or stderr, no disk manipulation, no http requests. All side effects should be implemented through `conda.gateways``. Objects defined in `conda.models`` should be heavily preferred for `conda.core`` function/method arguments and return values.

Conda modules importable from `conda.core`` are

* `conda._vendor``

* `conda.common``

* `conda.core``

* `conda.models``

* ``conda gateways``

Conda modules strictly off limits for import within ``conda core`` are

* ``conda api``

* ``conda cli``

* ``conda client``
